

Welcome to the Excel Hell

It is like a curse! People suffer today a lot in the "Excel hell"!

Excel applications are a great tool to build up ad hoc structured data. It is massively applied for communicating surveys, calculating budgets, keeping addresses, comparing product lists...

The better the Excel files are structured, the better the hell is fueled.

See here, how the Excel hell is working:

Just try to find the current/latest version!

The adhoc Excel file was done fast and efficient. Intermediate versions were created. Finalized versions were saved with a dedicated file name. After a while it was not possible anymore finding out which version is the actual one.

Just try to shared the updating process hell! Input for the Excel files was done with sending the files by mail, by sharing on net-drives etc. After a while it was not clear who's version is now the current one.

Have fun with keeping all redundancies in sync!

As more and more information areas are covered and saved, the more the duplication of data was unavoidable. Now, you are busy keeping the data that is spread on different sheets synchronized and updated.

Let everybody knows about your secrets!

After a while it get obvious that the information in the excel file was not for everybody's eyes, but some information is important for public reports. So start copying and duplicate again and having fun to synchronize even more files with the original data.

First lose your Excel files then lose your mind!

Ups, I forget to put the newest version on the drive and my PC has a disk crash. So, find out, which version was the latest, what structures did change lately, which information is restricted and which fields are redundant ...

Helping out of the Excel Hell

With our proven solution ***RX Method*** we provide ***adhoc business applications*** for an affordable price. Regular customized business applications are known to be expensive, but not with RX Method. We like to show that the investment in RX Method is returned within a few months!

RX Method shares many features with full fletched business applications except ***their price***. Our license terms can be seen on www.ooit.com/rx/rx-license.html)

- Data stored central in a relation database
- All data is accessed only by authorized personell
- RX Method includes document management (upload, tagging, download)
- RX Method includes Google like search

At the same time RX Method applications share the convenience of Excels without living in the Excel hell.

- Every attribute (Excel column) can be historized
- Editing data is managed by check out of single data objects
- Data can be freely linked without redundancies
- Data codes instead of plain text data (e.g. country codes)
- Strict authorization per attribute (Excel column) provides the confidentiality as needed
- Adding new attributes is as easy as an new Excel column
- Applications done with RX Method are 100% web-based. That means: ubiquitous access, no software installation on clients, no local data, no email delivery, no shared drives needed.
